VINEET SAMIR SHAH

Senior Software Engineer · Backend Services · Microservices · Distributed Systems · Kubernetes · AWS

Cambridge, MA | shahvineet95@gmail.com | 857-492-4444 | linkedin.com/in/vineetshah95 | github.com/vineetshah95

SUMMARY

Senior Software Engineer with over 6 years of experience specializing in backend systems, including microservices, REST APIs, event-driven workflows and Redis caching for enterprise applications. Builds and operates cloud-native services on Kubernetes and AWS, leads modernization of legacy platforms, and owns production reliability, with measured results that include 40% higher throughput and 20% fewer timeouts.

EXPERIENCE

SS&C Technologies · Intralinks **Waltham, MA**

Senior Software Engineer *Apr 2026 – Oct 2026*

- **Backend engineering:** Design and develop scalable Java Spring Boot backend services and REST APIs with focus on reliability, performance, security and maintainability, enabling production-grade microservices for enterprise customers.
- **Distributed systems:** Design and evolve microservices and distributed-system components spanning service integrations, event-driven workflows, Redis-backed caching and data-access patterns, reducing system latency and improving response times.
- **Platform modernization:** Lead migration of legacy content services to a next-generation microservices platform, including OS, JDK and build-system upgrades across multiple core services, reducing technical debt and security exposure.
- **Cloud-native delivery:** Build and operate containerized services on Kubernetes and AWS with Docker, Helm and Nginx, released through automated CI/CD pipelines with Grafana-based monitoring.
- **Production ownership:** Troubleshoot complex production issues spanning application code, databases, infrastructure and distributed-service dependencies, minimizing incident duration and preventing customer impact.
- **OS and runtime migration:** Led migration of multiple services from RPM-based to Ubuntu/DEB builds and images. Upgraded JDK and Gradle across middleware and platform services to eliminate end-of-life dependencies.
- **New service infrastructure:** Built build and deployment infrastructure for 3 next-generation microservices (file, content and management services), enabling containerized delivery through CI/CD.
- **Document security:** Built a document watermarking service for a virtual data room (VDR) content platform, including a reusable testing library and performance tests. Integrated Information Rights Management (IRM) and virus scanning into document workflows, and ran threat modeling for the service.

Software Engineer *Jun 2022 – Apr 2026*

- **Performance engineering:** Boosted throughput and reduced timeouts for high-volume bulk file-download workflows by building performance test scripts and optimizing based on the results.
- **Microservices & APIs:** Developed Java Spring Boot microservices and REST APIs for enterprise applications, enabling secure, scalable endpoints with automated testing and production-ready quality.
- **Modernization & security:** Contributed to database modernization, application migrations, JDK and build-system upgrades, CI/CD automation, application-security initiatives and cloud-native deployments, reducing infrastructure costs and improving team velocity.
- **Identity integration:** Implemented LDAP integration for the management server to support enterprise authentication and access control.
- **Agile leadership and incident response:** Served as Scrum Master for 10+ sprints and onboarded new engineers. Increased team delivery efficiency by 25% and cut incident resolution time by 20% by coordinating cross-functional incident response.

Autodesk **Boston, MA**

Software Developer Intern *May 2021 – Dec 2021*

- **Frontend development:** Developed and enhanced responsive web application features using Angular and TypeScript, building reusable components and integrating frontend workflows with backend APIs.
- **Access control:** Built dynamic role-based UI views with edit/view permissions using Angular and TypeScript, enabling fine-grained access to sensitive application data.
- **APIs & testing:** Enhanced Node.js/TypeScript backend APIs with unit and integration tests. Built Cypress end-to-end tests that reduced user-reported defects, improving product quality and reducing support burden.

April Innovations **Mumbai, India**

Full Stack Developer *Sep 2018 – Sep 2019*

- **Data platform:** Implemented a MongoDB data solution holding large dataset, replacing manual Excel-based data-entry workflows and eliminating error-prone manual processes, freeing teams to focus on analysis.
- **Healthcare platform:** Developed MEAN-stack web APIs for a doctor–patient platform supporting dynamic patient questionnaires and appointment scheduling, enabling seamless patient onboarding and reducing administrative workload.
- **Nonprofit platform:** Designed the UI and integrated an online payment gateway for a nonprofit site where contributors discover events and donate, simplifying fundraising and growing the nonprofit's revenue streams.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript

Backend: Spring Boot, Spring MVC, Spring Framework, Node.js, Express.js, REST APIs, Microservices

Frontend: Angular, React, HTML, CSS

Architecture: Distributed Systems, Event-Driven Architecture, System Design, Application Security

Cloud & DevOps: AWS, Kubernetes, Docker, Helm, Jenkins, CI/CD
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis
Testing & Tools: JUnit, Jest, Cypress, Performance Testing, Git, Bitbucket, Jira

EDUCATION

M.S., Information Systems, Northeastern University, College of Engineering, Boston, MA — Jan 2020 – May 2022
B.E., Computer Engineering, University of Mumbai (Shah & Anchor Kutchhi Engineering College), Mumbai, India — Aug 2014 – May 2018

CERTIFICATIONS & PUBLICATION

Certifications: Agentic Coding with Claude Code, GenAI Essentials for Everyone
Publication: *MoodyPlayer: A Music Player Based on Facial Expression Recognition*, IRJET, 2018
